JOINT EXAM FQ.

Q3

Q3@ What is internet service provider (ISP).

are company or organisations that provides individual business access to the internet.

b) Features to consider for affording the hardware performance.

→ cost → speed
→ Durability → storage
→ Reliability → portability
→ compatibility.

Functions of;

a) USB.

Parallel cable.

Transmit multiple bits of data simultaneously across several wires side by side, faster but short distance.

Serial cable.

Transmits data one bit at a time, in sequence, over a single wire pair, slower but works well over longer distance.

a) Hacking

It an act of accessing unauthorized material of information

an act of accessing unauthorise information for malicious purpose.

ii) Data privacy.

The right and practice of ensuring sensitive information is collected stored and used with authorization

iii) Data integrity. It the accuracy, consistency, and reliability of data over its entire life cycle

b) what is virus

It the malware program that replicate in the computer. and lower the function.

i) @ sharing intended files
b) visiting Unmuted website.

a) Importance of using manual presentation.

→ cheap
→ Easy to prepare
→ flexible

Qualities of good ~~presentation~~ presenter

i) Appearence
ii) Tone / voice projection.
iii) proximity
iv) facial expression
v) eye contact
vi) posture.

Define the following

i) partitioning.

Dividing a hard disk into multiple separate independently managed sections.

ii) Compression.

Provide available space for storage of files by compressing the size of other files.

iii) Defragmentation.

Removing fragment from the computer or the computer to work faster

iv) Back-up.

means copying Data to the second medium like flash disk, floppy disk etc.

iv) Conversion.

v) Computer operator.

Runs and monitor computer system for routine data processing

vi) Computer engineer

Design, develops, and maintain computer hardware and system

vii) Computer trainer

Teachers individual how to use computer system.

viii) Computer typesetter

Types and format document documents or text for printing / publishing using a computer

ix) Computer technician.

Installs, repairs and maintain computer hardware and software.

x) Network administrator

manages and maintain computer networ connectiv and security

xi) Information manag

Oversees the collection, storage and management of organisation's data.

x) Web administrator

manages and maintain

20

Importance of using DTP software.
i) They are useful for preparing various kinds of publication
ii) Used for commercial perpose, as the source of income
iii) Facilitate sharing of publication via physical and electronic channels.
iv) Good when used to prepare the attractive material.

Common features of DTP. software.
01. Various project types.
allow flexibility depending on what the User needs
02. Layout tools.
help a User to plan a design a publication on a page.
03. Text tools.
help to transform text to get ~~eff~~ artistic effects
04. Graphic tools.
produce publication with high quality graphic document
05. Printing and sharing.
allow printing to produce hard copy and sharing document in various ways

Examples of DTP software
i) QuarkXpress
ii) Adobe creative suite
iii) Express publisher
iv) pagemaker
v) Ms publisher.

Types of publications.
i) News letter
ii) Bronchure.
iv) flyer
iv) Business card.
v) post card
vi) Book.

What is the Database Management system (DBMS)?
Is the software which is used to controls and manipulate the Database. (manages)
Example Ms Access, Oracle MySQL

Difference between router and switch.
router is the network device used to forward communication traffic among the network devices.

Q7

Absolute cell reference
can not change when the formular is copied to another cell

Relative cell reference
is the cell reference that change automatically when the formula is copied to another cell

mixed cell reference.
either column or row is fixed while other part can change

Q8

What ~~de~~ is the function of each of the following components in the computer system.

i) ALU.

ii) CU

iii) CPU.

Why computer store data in binary form.

-

Interactive content
is the content which brings the direct interaction btn the content and users

Importance of interactive content

→ Increases awareness
→ Enhance attention of the user
→ Greater social engagement
→ Increases exposure
→ Reduce risks

Characteristics of interactive content

→ Comprehensive
→ User-controlled and adaptable
→ promote active engage
→ specific target
→ Immediate feedback

Q) What is a presentation program?

It is the software that is used for preparing, ideas or information.

Used to deliver and prepare presentation

Q) present and analyse three precaution which should be taken when adding animations to a presentation you have prepared.

a) Use simple animation as much as possible.

b) Avoid unnecessary use of too many animations

c) Adjust the timing of an animated object to suit the need of a presentation.

Q) Differentiate between transitions and animations as applied in MS Power Point 2016.

Transitions are animations applied when moving from one slide to another

WHILE

Animation are the features which make object to move on the screen.

Q) Describe the step of adding a video clip to a presentation prepared using MS Powepant 2016.

i) Select the slide to which you want to add video

ii) Click on the Insert tab

iii) On the Insert ribbon, click video button located on the right side.

iv) Choose the media or link that contain your video.

v) Select the video file you wan

vi) Click Insert button.

Q) what is Multimedia

It the way of conveyi information using more that one medium

Q) Types of multimedia

a) Non-linear multimedia.

require user interactio for content to proceed.

b) Linear multimedia.

can proceed without user interaction.

Characteristics of multimedia
i) computer controlled
ii) Integrate and process more than one form of information
iii) Information is represented digitally
iv) It is Interactive.

Factors for Multimedia to work effectively
- High processing power
→ ~~Mul~~ Efficient and fast Input/output
→ Large storage and Memory Capacity
→ Reliable Network support
→ Software application or (system) System)

Uses of Multimedia
→ Entertainment
→ Medicine
→ Advertisement
→ Education.
→ Medicine

Validation rules.
Is the condition used to control or restrict data entering to the field.

Between 0 and 100

1

Like "07#########"

Date.

Between ~~01/1~~ #01/01/2026
And #31/12/2026#

Query.

Under class code ("12A","12B","12

Date

AGE: DateDiff("YYYY",[DOB],N

Discussion

Computer Network

It the connection of two or more computers for the purpose of sharing resources / information

Advantages of Computer networking at school

i) Sharing of educational materials
ii) Centralized data storage
iii) Cost saving.
iv) Easy software Update.
v) Collaborative work.

Importance of DBMS

✓ Control redundancy
✓ Allow multiple user to access data
✓ Easy data sharing
✓ Enhance data security
✓ faster data retrival.
✓ Easy back up and recovery
✓ Efficiency
✓ Easy linking of data.

Explain the following

i) Table

It the collection of related records.

ii) Field

A single category of data. OR lot of homogeneous value in a table

iii) Record

It the collection of related field

Explain System Development life cycle.

It step by step instruction foll when developing the informa system.

The stages

i) Feasibility study
ii) Analysis,
iii) Design
iv) Development / Implementation
v) Testing
vi) Maintainance

Aims / Importances of SDLC

i) Determine if the project is technically / financially / operation possible.

ii) to avoid wasting resources on an unworkable system

iii) to identify risk early

iv) to estimate cost and time realistically

v) Accept any reasonable justification

HTML (Hypertext mark-up language)
Is the language used to create the web pages. (web related file)

Webpage
Is the single electronical document that viewed in the browser

Tag
Is the keyword that is enclosed in angle braket that define element

Attribute
extra information added in a tag.

Hyperlink
A clickable link to another page

Difference of Website and Webpage

Website.
Collection of related webpage.
Webpage
Is a single page.

Website.
have a domain name to identify it
Webpage.
Identified by URL/page name.

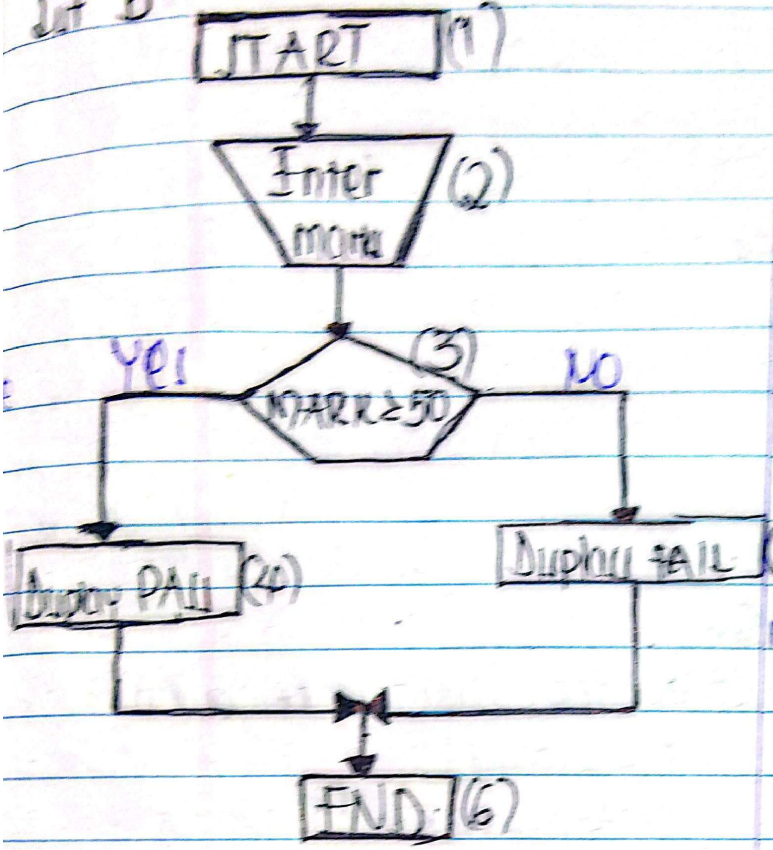

Website
has a home page.
Webpage
doesn't necessarily have

Computer ethics and crimes

Computer ethics:
Is the moral principle guidlines that govern the accept ways of using computer

Q.

study the completed flowchart below and match each labelled symbol in list A with the appropriate function in list B.

Symbol 1.

Represents beginning of an algorithm

Symbol 2.

Represent Input of data

Symbol 3.

Represent decision or condition.

Symbol 4.

Represent output of information

Symbol 5

Represents output of information.

Symbol 6.

Represents the end of algorithm.

Q. In what is the role of the Internet service provider

Q.

a) Cybercrime Means to an crime that target or involve the u of computer Mobile phone a network.

b) Mention and Explain the Cybercrime activities

i) Computer viruses

Are programs that attach them to a system or a file and have tendency to circulate to other on a network for an intention harming the system

ii) Fraud

Stealing by false pretend

iii) Software piracy

Unlawful download or distribu of copyrighted material witho permission from the owner

Identity theft
It an act of using someone's personal data illegally without his/her knowledge to make unauthorized transactions

Denial of service (DoS)
It an explicit attempt by attackers to deny service to ~~inte~~ intended user of the service.

Hacking
an act of gaining unathorized acces to information for malicious perpose

Cyberstalking
Use of social media or Internet application to harass individual or group or Organization

Eavesdroping
Acts of tapping to communication channel to get information secretely.

phishing
It a fraudient action that attempts to obtain sensitive information like Username, password or credit card detail using fake phone, websites etc.

Qn
Describe the situation where you will use non-electronic presentation over the electronic presentation

Qn
State the qualities of good presentation
i) proximity
ii) Appearance
iii) Eye contact
iv) Voice projection and tone
v) posture.

Qn
Explain three types of Database User found in an Organization
i) programmer
the one who writes the program

ii) End User
Interact with the system offline or Online.

iii) Database administrator
Manages DBMS.

iv) Designer
Who design the system.

Qn.
State the steps followed when creating a new table in a DBMS.
i) Go to the home tab(ribbon)
ii) Click. Create.
iii) Then Click Table. and the new table will be displayed.

Qn
What is text wraping. explain it advantage.

Qn.
Differentiate between Gutter Margin and Page Orientation

Qn.
State four quality layout rules in DTP.

Qn
Explain how increase in production of electronic communication devices has negative Impacts to the environm

Qn
State the advantages of interne
i) It save cost
ii) Simplify communication
iii) Improve International cooperation an interaction
iv) Enhance education
v) E-marketing
vi) Transportation activities
vii) Entertainment

Qn
Discuss on the characteristics of good website

i) User friendly navigation
ii) Webpage speed
iii) Visually attractive Images
iv) Responsive design.

Qn
What are Importances of webpage designs

i) Impressing your audience
ii) Creating competitiveness
iii) Creating trust to your audience.
iv) Consistency in branding your online business.

Qn
State the limitation of HTML.

i)

Challenges of computer network

✓ Cyber crime
* multiple intergration of the system
✓ Bandwidth issues

Qn
Explain the carriers available in computing field.

✓ Cybersecurity
✓ Software engineering
✓ Network administrator
✓ website developer
✓ ~~web~~ hardware engineer.

Challenges facing information dissemination.

i) Language barrier
ii) The speech which was above the audience knowledge

what is the guided media. Vs Unguided media.

guided media | Unguided media

Classification of ~~of~~

i) according to ~~per~~ purpose of use

ii)

Difference of file and folder

folder is the depository area where related file are all kept while file are areas in which we can store data within.

Why is it advised to close doors and window in a computer lab 4 reason.

i) Avoid accumulation of Dust

ii) To ensure safety

iii) To avoid the inter of moisture from rainfall.

iv)

A school is facing hardware failure and slower performance. describe four measures you would take to protect computer from damage.

describe four computerized service available in the banking industry

i) Withdraw of money

ii) Depositing of money

iii)
